The ECU shuffles through the tons of data that come to it in the form of readings to decide the course of action that should be taken by the engine to ensure an ideal drive. The ECU tells your engine not only what to do but also how to do it. Thus the ECU in order to make accurate diagnosis on engine control utilizes stored data.

An engine control unit (ECU), also commonly called an engine control module (ECM), is a type of electronic control unit that controls a series of actuators on an internal combustion engine to ensure optimal engine performance. It does this by reading values from a multitude of sensors within the engine bay, interpreting the data using multidimensional performance maps (called lookup tables ...

Fuel Map or Fuel Table . Modern automotive technology relies on electronically controlled devices to monitor and operate the car's engine. An important process that determines the performance of the engine is the fuel injection process. Fuel injection is the process that causes combustion in an engine by combining fuel and air.

Fuel Map or Fuel Table - Formula 1 Dictionary

In the ECU the engine torque map is used to position the engine throttles to match the drivers' torque demand. This is a 2-dimension table with engine speed and throttle as inputs and torque as output. This map is defined point-by-point or by ramps at the test rig with the fired engine and the torque meter. The inverse engine torque map. It ...

The engine ECU needs to know the boosted air pressure so the engine has a boost pressure sensor (manifold absolute pressure (MAP)sensor.). The ECU also needs to know the air temperature so the engine has an Intake Air Temperature (IAT) sensor. The desired Boost for engine speed and IQ is controlled by the Boost map.
