An engine room simulator has recently been developed to simulate the behaviors of a 2700 TEU container ship under different performance faults and different running conditions. This paper introduces the mathematical models of the main diesel engine including chamber combustion

model, variable injection timing model and hull-propeller engine model.

Simulation can compress years of experience into a few weeks, and generate knowledge of the dynamic and interactive processes typical for a real engine room. Professionally delivered simulator training will reduce accidents and improve efficiency, giving the engineers the necessary experience and confidence in their role.
