The morse test in I.C engines. The morse test is a test conducted to determine the power developed in each cylinder in a multicylinder ic engine. first the the power developed by all the cylinders together is determined experimentally. Then the power of the individual cylinders are determined by cutting off the power supply to...

An internal combustion engine (ICE) is a heat engine where the combustion of a fuel occurs with an oxidizer (usually air) in a combustion chamber that is an integral part of the working fluid flow circuit. In an internal combustion engine, the expansion of the high-temperature and high-pressure gases produced by combustion applies direct force to some component of the engine.

**Internal combustion engine - Wikipedia**

The method of finding indicated power of one cylinder of a multi-cylinder I.C. engine without the use of a high speed indicator is known as the Morse test. The engine is first run under the required condition of load, speed, temperature, etc., and the brake power is measured accurately.
