The straight-five engine or inline-five engine is an internal combustion engine with five cylinders aligned in one row or plane, sharing a single engine block and crankcase. The justification for a five cylinder engine is that it is almost as compact as an inline-four, and almost as smooth as a straight-six engine.

The purpose of a gasoline car engine is to convert gasoline into motion so that your car can move. Currently the easiest way to create motion from gasoline is to burn the gasoline inside an engine. Therefore, a car engine is an internal combustion engine — combustion takes place internally. Two things to note:

Put in the AAN windage tray when you build the engine. Be careful when bolting the cam drive pulley to the back of the harmonic damper. If you don't pull it up evenly/slowly with the four allen head bolts you can crank the pulley. The problem being is the it's behind the harmonic damper and you won't know.
