Null 0 is a virtual interface that's used to guarantee routes make it into the RIB; remember, routes must have a next-hop in order to make it into the RIB. When a packet arrives at a device that has a route to Null 0 and nowhere else, it will discard it similar to how an ACL would. Think of this as the virtual interface where packets go to die efficiently.

routing - What is Null 0 interface? - Network Engineering ...

Definition and importance of manufacturing bill of materials (MBOM) and the differences between manufacturing BOM and engineering BOM.

Manufacturing Bill of Materials (MBOM) | Arena Solutions

This existing question sums up the basics of my question. The best answers there tells the difference between the two methods. I am looking for guidelines as to which method to use. In short, I have an action in a controller which process a form and then display the results of the processing.

When do you use View() vs. RedirectToAction - Stack Overflow

I would like to disable "Confirm Form Resubmission" popups on Google Chrome when I make a refresh. This (very) old discussion acknowledges the problem but doesn't provide a fix. Is there someone out

Disable "Confirm Form Resubmission" prompt on Google ...

A nibble has 4 bits (although it doesn't have to). That also means that when you view a byte's value in hex-notation, one hex digit corresponds to one nibble.

binary - How many bits are there in a nibble? - Stack Overflow

Ok, each core represents a physical cpu, so 2 cores its like having 2 cpu's sandwiched in one, thats good because each are independent from each other, and each core can run from 2.8 to 3.46 ghz depending on the temperature, so if your cpu is kept cool it can run up to 6.92 ghz of pure processing power.

How do I read Intel CPU specs? - Super User
