ZnO thin films with very low surface roughness and bulklike electron density were grown on Si and SiO₂ by atomic layer deposition. The real and imaginary parts of the complex dielectric function of

ZnO on Si show monotonically decreasing values with decreasing film thickness at and below a threshold of about 20 nm. On the other hand, x-ray reflectivity results show that the electron density of ...

The procedure employed by Mayer for the calculation of osmotic pressure and activity coefficients of ions in solution from the Fuchs expansion of the grand potential in multicomponent systems is applied to the recently obtained expansion of the potential of average force in these systems. The resulting multiply infinite series are summed to give a series analogous to the original expansion ...

Graviton, the carrier of gravitational force, has remained as ever elusive to the physicists till today. But the graviton has a relation with the ϵT , the quantized energy of thought-carrying particle. This ϵT can be correlated with the Planck system of units like E_p (Planck energy), m_p (Planck mass), λ_p (Planck length) and τ_p (Planck time).

Developing an Equation to Compute the Wavelength (λ_g) and ...

Thermodynamics is certainly the most ubiquitous subfield of Physics outside Physics Departments. Engineers, Chemists, and Material Scientists do not study relatively or particle physics, but thermodynamics is an integral, and very important, part of their degree courses. Many people are drawn to Physics because they want to understand why the

A self-enforcing treaty can be modeled as a Nash equilibrium of a suitably defined dynamic game among a large number of sovereign countries of diverse sizes and economic capabilities. We study such a game and characterize its equilibria (typically there are many) and the global-Pareto-optimal solutions.
