Has anyone figured out a way to get the pump timed on an electronic E7 without buying that expensive little box with the 2 lights on it? Another problem, I can't even find a static timing figure to set the engine to if I had the timing box??? I looked at the flywheel today to see if it was marked but only see a couple nicks on the edge around 32 and 38 degrees?

What has me confused is normally valve lash is adjusted from the "base circle" of camshaft (at least on every other engine I've worked on). So is this not the case with these Mack E7 engines? Also I do not think the cam is wiped out because all the valves have more (about the same) clearance when rolled past the adjustment markings.
