Sending Unit & Sensor Locations for Cummins Marine Diesels

The sending unit is located in the fuel tank of the car. It consists of a float, usually made of foam, connected to a thin, metal rod. The end of the rod is mounted to a variable resistor. A resistor is an electrical device that resists the flow of electricity. The more resistance there is, the less current will flow.

The Sending Unit - How Fuel Gauges Work | HowStuffWorks

The job of the temperature sending switch or coolant temperature sender in your vehicle is to let you know, through the temperature gauge on the dashboard, when the engine is operating under abnormal temperatures. However, an aged sender unit may fail to detect an overheating engine and may fail to warn you of a major disaster.

How to Change the Temperature Sending Switch in a Ford ...

Checking and replacing a fuel sender unit. An empty tank can be more of a risk than a full one. There is always petrol vapour in it - even if it has been empty for months which the slightest heat or spark can explode.

Checking and replacing a fuel sender unit | How a Car Works
