METROLOGY AND COMPUTER AIDED INSPECTION

Computer Aided Inspection. Computer Aided Inspection (CAI) is a new technology that enables one to develop a comparison of a physical part to a 3D CAD model. This process is faster, more complete, and more accurate than using a Coordinate Measuring Machine (CMM) or other more traditional methods.

Computer-Aided Inspection in Aerospace Manufacturing. Computer-aided inspection (CAI)—in which production parts are directly compared to 3D CAD models—is one of the latest examples of the aerospace industry's use of advanced technology. This isn't just about heavyweights Airbus and Boeing, but their suppliers and the tier 2 and 3 suppliers as well. Advancements in CAI trickle down the supply chain.

Metrology. The role of metrology within the manufacturing process has long been associated with quality assurance – a post-production inspection of the dimensional measurements of a part against specifications. Results either indicated that the the part was either good to go, or that it was not to standard and needed, at best, reworking, or at worst,...
