Coolant Flow Radiator And Engine Block Below is an explanation of this system's operation The Thermostat Just like your body needs to warm up when you begin to exercise, your car's engine needs to warm up when it starts its exercise. The thermostat provides control for your engine's warm-up period.

coolant flow radiator and engine block - thecarguys.net

But since I don't see this 'recirculated' water source entering the thermostat housing, I'm assuming the water is coming up from underneath the housing itself, and that indeed the direction of water flow is from up out of the block, through the housing, back to the recirc pump at the front of the engine, and into the engine again..

what path does water flow through block? - TeamTalk

When the engine warms up, the wax melts, expands and pushes the valve open, allowing coolant to flow through the radiator. When the engine stops and cools, the valve closes again. Water expands when it freezes, and if the water in an engine freezes it can burst the block or radiator.

COOLING SYSTEMS - boatfix.com

The D3UZ pump is the standard cast iron water pump used on 289, 302 and 351W engines through 1969. The C5AZ high-flow pump was originally 289 High Performance-specific from 1965-67. These water pumps are interchangeable, with their inlets located on the right-hand side of the vehicle. To upgrade to a cast iron water pump, you must use

Ford Small Block Water Pumps, Radiators and Cooling System

The flow diagrams shown are different from mine as they show two hoses from the intake (raw water) one leading to the stat and one going to the pump for the exhaust manifolds, where mine on the 318 only has the one raw water inlet which divides at the stat housing for the exhaust manifolds and the engine.
