Problem Set 1 Solutions Point totals are in the margin; the maximum total number of points was 52. You should use these solutions as a rough guide to the level of detail expected in your own solutions. 1. Testing commutativity in groups (a) Note first that some generator g_i must lie outside H , since H is a proper subgroup. So let i be the 5pts

276 DESIGNING SEQUENTIAL LOGIC CIRCUITS Chapter 7 ble operation points (A, B, and C), as demonstrated on the combined VTC. The following important conjecture is easily proven to be valid: Under the condition that the gain of the inverter in the transient region is larger than 1, onlyA

DESIGNING SEQUENTIAL LOGIC CIRCUITS

The most common solution is for the network's switches to collectively solve the problem of finding paths that the end points' packets take. Although network designs where end points take a more active role in determining the paths for their packets have been proposed and are sometimes used, even those
